

# SC Remote Features Improved

[Released July, 2025]

Version 2.26.0

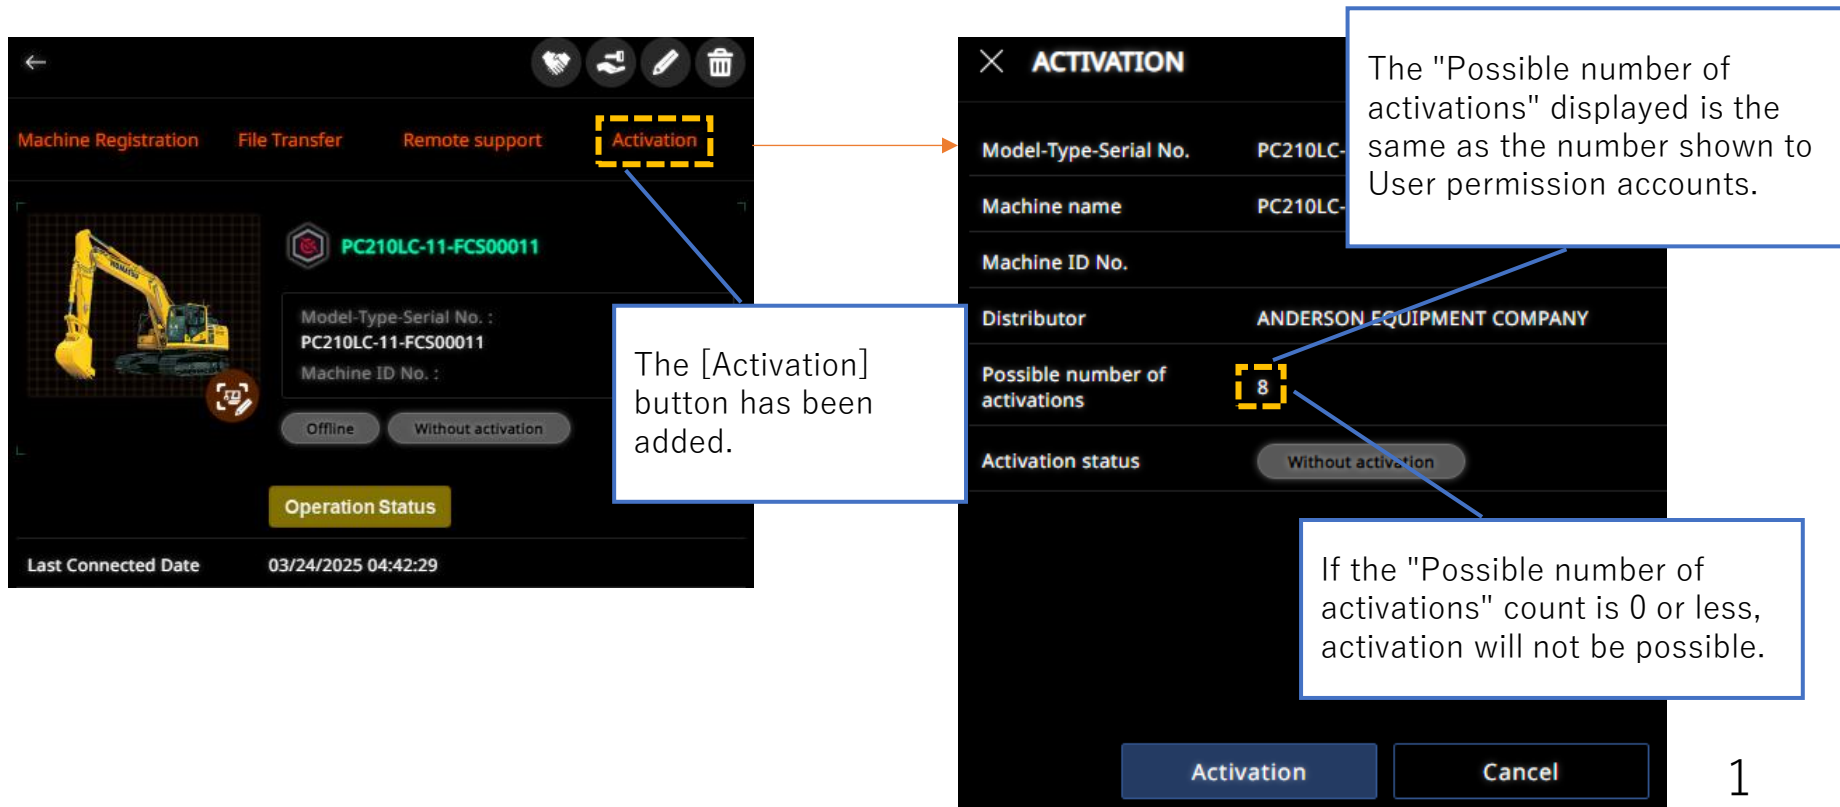

# Activation by Admin and DB Users

Users with Admin and DB permissions can now perform machine activation, which was previously available only to User permission accounts.

Please use the [Activation] button located at the top right of the machine detail screen.

This feature is provided to support end users more effectively.

Note: Deactivation must still be performed by users with User permissions, as before.

The [Activation] button has been added.

The "Possible number of activations" displayed is the same as the number shown to User permission accounts.

If the "Possible number of activations" count is 0 or less, activation will not be possible.
